## ***TPX™ Motorcycle Radar and Laser Detection System*** **Receives Four Star Rating from Radar Roy**

New York, NY - March 14 2008 - The *TPX™ Motorcycle Radar and Laser Detection System* was recently evaluated by Radar Roy, one of the most trusted evaluators of radar detectors in the market today. Radar Roy's credentials include being a former police officer and a certified radar instructor.

The *TPX™ System* "was by far the cleanest install of any radar detector system that I have ever seen on any bike!" said Radar Roy. "Performance wise the *TPX™ System* alerted... in a timely basis, even while I was riding through the mountain curves and encountered an 'off axis' ambush."

Roy further added, "I found that pressing the oversized buttons on top of the unit for programming was very easy, even with insulated leather gloves. Hearing the detector alerts with the wireless headset was not a problem, even while listening to tunes from my iPod. The external LED light was also an eye catcher even in the Arizona sun. On the evening ride home the blue backlit buttons were easy to see and control."

"We are very pleased with Roy's review", said Adam Gold, Chief Technology Officer of Adaptiv Technologies. "When we met with Roy, the *TPX™* was tested alongside the Beltronics' STi-R. Both units picked up radar signals at virtually the same point each time a radar signal was detected. This verifies that the sensitivity of the *TPX™* unit is right on par with the best automotive radar detectors."

The Four Star rating from Radar Roy is the second seal of approval the *TPX™ System* has received from independent evaluators in the radar detector industry. The first is the "Performance Certified" seal of approval from Speed Measurement Laboratories who certifies proper performance of radar detectors in the market today.

The *TPX™ System* is available at **www.RadarForBikes.com** and select motorcycle dealerships. For more information, go to **www.RadarForBikes.com** or call 866-ADAPTIV (866-232-7848).
